Aggregation Workshop: Sub-task 4.4.0

JULIAN RICHARDS

UNIVERSITY OF YORK – ARCHAEOLOGY DATA SERVICE

WHY ARE WE DOING IT?! WHAT DO WE WANT TO GET OUT OF IT?

- Enabling cross-border / cross-institution resource discovery i.e. finding data
- Enabling interoperability – across partners, countries, data types, data schemas i.e. enabling research

HOW WILL WE MEASURE SUCCESS?

- **Quantity**
  - Number of records in the ARIADNE Catalogue
  - Number of countries represented
- **Quality**
  - Good *meaningful* search results
  - Level of *granularity* – item level interoperability e.g. individual artefacts, not just sites; individual dates; individual graves, not just cemeteries
  - Integration of new data types
- **Quantity and quality** of re-use i.e. new users; new research

HOW WILL WE GO ABOUT IT?

- **Human interface – ARIADNE portal**
  - ARIADNE Catalogue (AC)
    - Harvested collection level metadata, but also item level data, and ontologies
    - Links to distributed digital and paper resources
  - What, When, Where searches
    - Enhanced map-based searching
  - Enhanced queries, specific to data types
- **Machine interface – via APIs**
  - Mirrors what is available via the catalogue
  - Makes it available as Linked Open Data
  - Allows other organisations to implement their own portal or service based upon the ARIADNE AC

THE CHALLENGES

- **Heterogeneity** – data is diverse in character and content
  - Sites
  - Reports
  - Finds
  - Datasets e.g. excavation archives
  - Now *ARIADNEplus*
    - more sub-domains e.g. scientific data;
    - more data types e.g. images, GIS, LiDAR
- **Diverse ontologies, and vocabularies**
- **Multilingualism**

THE SOLUTIONS

- **User needs study –** which searches do we wish to support?
- **Data availability** – "low hanging fruit" – critical mass of item level data e.g. reports, sites, finds > "Semantic categories"
- **Ontologies** – CIDOC-CRM – to help provide an Object-Orientated data structure – shows how data types are related
- **Data mappings**
  - What? – Getty AAT
  - When? – Period0
  - Where? – WGS84
- **Application profiles** – subsets of the CRM we use for item level integration (cf ARIADNE coins)
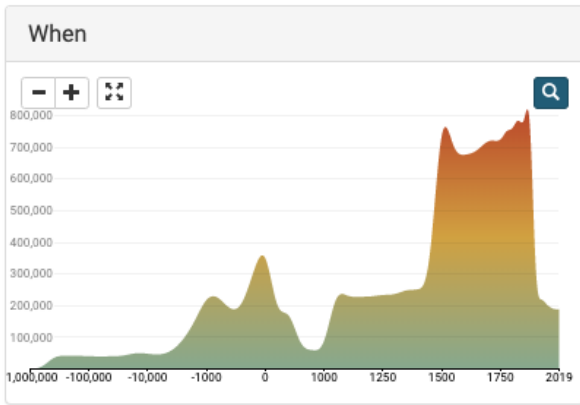

SUB-TASK 4.4.0

- **4.4.0.1 Sites and monuments inventories**
- **4.4.0.2 Event/intervention resources**
  e.g. grey literature
- **Also provides "Collection level" descriptions for**
  - **4.4.6 Survey**
  - **4.4.9 Buildings**
  - **4.4.12 Excavation**
  - **And others…**
  - **So long as can provide What, When, Where metadata**
- **For this sub-task CIDOC-CRM mapping to ACDM done at global level**

CATEGORY DEFINITIONS

Partner	Contact	4.4.0.1 SMR inventories	4.4.0.2 Event records/ grey lit	Notes	Notes 2 - timescale	Target	Priority
AIAC	JOHNSON, Mike		Fasti Online	Reload Fasti via OPAI-PMH	Quarterly, but maybe monthly if could check for new records; would be interested in using NLP	June 2019	1
ARUP	NOVÁK, David	"sites" dataset, which is topic-based (hillforts, castles, sites of aerial prospection, etc.; about 1000 sites now, up to several thousands later this year)	"fieldwork events" (about 24,000 records currently, but will be growing soon up to about 100,000 records)	We would like to erase existing data and start it from scratch; http://digiarchiv.amapa.cz/; Both datasets have reference/link to documents available in the Digital Archive (currently about 70,000 documents with many more being prepared for import).	Mapping to CIDOC-CRM is in progress (will be done during March). Probably some mapping to ACDM would be needed, I guess? Mapping of vocabularies is not done yet and will have to be. My guess is, if provided with guidance that in early autumn is a realistic date for our data to be included.	October 2019	2
ASU	FERNANDEZ, Rachel		Potentially 200,000 records	Will need to do some mapping of periods and subjects; need to use USW tool		October 2019	2
AU	ANDRESEN, Jens	Danish NMR - 50,000+ records	10,000 reports	Harvestable via OAI-PMH; http://www.kulturarv.dk/fundogfortidsminder/		October 2019	2
BUP	DEGRAEVE, Ann	1000+ entries	Currently 25, but will grow rapidly in 2020	The archaeological sites and monuments inventory consisting of a short description of the site/monument with pictures and maps. If an excavation has been done on the described site, a short description in the same style of the inventory will be visible on the same webpage with a link to the online publication that you can find here: http://patrimoine.brussels/decouvrir/publications/collections-d-archeologie/archeologie-a-bruxelles and where you can download a pdf version.	New website being developed summer 2019; This website will be bilingual (french-dutch) with the use of standardized vocabularies. All requirements necessary (eg mapping to Getty AAT, Period O) will be added in the tendering document, including preparing the data for harvesting by AriadnePlus	Jan/Feb 2020	3
CARARE	CORNS, Anthony	184,318 SMR records from NMS; also National Inventory of Architectural Heritage	1964 excavation reports and 176 geophys reports	SMR records are same as in ARIADNE	May need to check mappings	June 2019	1
CNRS MASA	MARLET	150 sites	Around 7 event	AERRA (http://serba-hume-num.fr/); Atlas of	Available as LOD

🌐 **Access resource on the web** ⤢

The fortress Vishegrad is located on a rocky peak on the right bank of river Arda (dam Studen kladenets). It covers an area of 0.56 acres. The south wall is 75 meters length and wide from 1.70 to 2 m. In the eastward end and in the middle of the south wall were erected two rectangular towers. The lower floors of the towers were plastered with hydrophobic paint and served as reservoirs. In places the walls of the towers and fortress walls rise up to 8 m in height. The main entrance was from the southeast and was 2.5 meters wide and later was narrowed to 1.2 m. The castle was built in 12th century. On the foundations of an ancient fortress and probably functioned until early 15th century. The fortification facilities are well preserved; some of them have been restored.

Mogilite Settlement 2006 2007 Bibliography

Summary (English)

EXPLORATIONS NEAR THE VILLAGE OF POMOSHTNIK (Ventsislav Dinchev – vdintchev@abv.bg) Remains of a complex consisting of buildings and constructions spread over an area of 0.2 – 0.3 ha are situated on the site. A building with at least five rooms and an inner yard, with a total area of more than 300 sq. m and oriented northwest – southeast, was explored in the northwestern sector "A". The inner yard measures 9.80 m by 8.70 m. The foundations of the walls are constructed of uneven and roughly cut stones with a bonding medium of mud, 60 – 70 cm in thickness. Most likely, the walls were built of lath-and-plaster or boards plastered with clay. The roofs of the rooms were covered with tegulae and imbrices. The finds include nails, cramps, millstones, pottery, terracotta weights, a spindle whorl, jewelry and c. 10 copper coins (the latest one minted in AD 367 – 370). Residual finds from earlier periods were also found. The building functioned during the 4th century AD and was burned during the Gothic invasions in the AD 370s. A square fortification tower was explored in the central sector "B". Its inner size is 4.30 m by 4.30 m and its walls are c. 1.60 m in width. The foundations of the tower are built of uneven stones bonded with mortar. The walls were constructed of ashlars and their faces were plastered with mortar. The tower is synchronous to the building in sector "A". Iron slag was found in the cultural stratum between the building and the tower. It shows the existence of a forge. The architectural complex could be identified as a burgus with additional residential and farm buildings.

Steinbrunn-le-Bas, Lotissement « du Château », Lieu-dit « Hinter der Wagner » : rapport de diagnostic

📄 ▤ 🔗 ✉

🌐 **Access resource on the web** ⤢

Les sondages ont mis en évidence labsence complète de vestiges archéologiques ou même déléments mobiliers épars. On peut conclure dans ce cas à un site nayant jamais fait lobjet dune occupation ancienne pérenne ou même temporaire. Son profil en pente eet sa relative distance par rapport au château expliquent probablement cet état de fait. Concernant la topographie du château, on peut envisager que lactuelle rue du château ait pu constituée sa limite extrême du côté nord.

Rhenen De Bastions en het Hoornwerk Bureau-onderzoek

📄 ☰ 🔗 ✉

🌐 Access resource on the web 🗗

De Bastions en het Hoornwerk te RhenenEen BureauonderzoekIn opdracht van BOOT Organiserend Ingenieursburo B.V. heeft ADC ArcheoProjecten een bureauonderzoek uitgevoerd voor het plangebied De bastions en Het Hoornwerk in de gemeente Rhenen. In het plangebied zullen de aanwezige verdedigingswerken, onderdeel van het Rijksmonument Grebbelinie, worden hersteld zodat ze beter zichtbaar en (gedeeltelijk) toegankelijk zullen zijn. Het onderzoek is uitgevoerd in het kader van een omgevingsvergunning en was noodzakelijk om te bepalen of bij de voorgenomen activiteiten de kans bestaat dat archeologische resten in de ondergrond worden aangetast. Op basis van het bureauonderzoek worden op en in de top van de uiterwaardafzettingen van de Nederrijn archeologische resten verwacht vanaf de Late Middeleeuwen tot 18e eeuw. Deze resten zullen zich echter onder De Bastions en het Hoornwerk bevinden (ca. 3 tot 5 m -mv). Gezien het feit dat uiterwaarden periodiek overstromen, worden geen bewoningsresten verwacht. Hier komt bij dat de locatie in een gebied ligt dat op de geomorfologische kaart als afgegraven en geëgaliseerd is weergegeven. Mogelijk

RHENEN DE BASTIONS EN HET HOORNWERK BUREAU-ONDERZOEK

Overview | Description | Data files (1)

2011-06-16 | ADC ArcheoProjecten; Rooij, J.A.G. van; | ❯ 10.17026/dans-xxx-jnen

In opdracht van BOOT Organiserend Ingenieursburo B.V. heeft ADC ArcheoProjecten een bureauonderzoek uitgevoerd voor het plangebied 'De bastions' en 'Het Hoornwerk' in de gemeente Rhenen. In het plangebied zullen de aanwezige verdedingswerken, onderdeel van het Rijksmonument Grebbelinie, worden hersteld zodat ze beter zichtbaar en (gedeeltelijk) toegankelijk zullen zijn. Het onderzoek is uitgevoerd in het kader van een omgevingsvergunning en was noodzakelijk om te bepalen of bij de voorgenomen activiteiten de kans bestaat dat archeologische resten in de ondergrond worden aangetast.

Op basis van het bureauonderzoek worden op en in de top van de uiterwaardafzettingen van de Nederrijn archeologische resten verwacht vanaf de Late Middeleeuwen tot 18e eeuw. Deze resten zullen zich echter onder De Bastions en het Hoornwerk bevinden (ca. 3 tot 5 m -mv). Gezien het feit dat uiterwaarden periodiek overstromen, worden geen bewoningsresten verwacht. Hier komt bij dat de locatie in een gebied ligt dat op de geomorfologische kaart als afgegraven en geëgaliseerd is weergegeven. Mogelijk is dit gebeurd ten behoeve van de baksteenindustrie, die vooral in de Nieuwe tijd plaatsvond, maar hier zijn geen aanwijzingen voor aangetroffen. In de diepere ondergrond van het plangebied kunnen in het pleistocene oppervlak in potentie archeologische resten bevinden uit de periode vóór de IJzertijd. De diepteligging van het zand bevindt zich volgens ArchisII op 2 m -NAP (ca. 12 m -mv). De intactheid van dit oppervlak is echter onbekend.

De bastions en het hoornwerk zijn aarden verdedigingswerken, die in eerste aanleg uit de 18e eeuw dateren en zijn nadien in de (jaartallen) aangepast/uitgebreid/verbeterd. In top van de ophogingslagen van deze bouwwerken worden geen archeologische waarden in situ verwacht. Wel kunnen in het gebied (op of in de top van de bastions en het hoornwerk en in de grachten) losse vondsten uit de periode vanaf de 18e eeuw tot en met de Nieuwe tijd aanwezig zijn. Deze vondsten zijn gelieerd aan de militaire functie van de Bastions en het Hoornwerk tussen de Franse tijd en de Tweede Wereldoorlog.

In het gebied worden de grachten uitgebaggerd, de scherpe belijning van de aardwerken hersteld en zal de begroeiing worden verwijderd. De kans dat door deze ingrepen (mits deze 'historisch verantwoord' plaatsvinden) de verdedigingswerken zelf en eventuele onderliggende archeologische resten worden aangetast of verstoord, wordt klein geacht. ADC ArcheoProjecten adviseert daarom om het plangebied vrij te geven voor de voorgenomen ontwikkeling. Wel wordt geadviseerd het uitbaggeren van de grachten te begeleiden. Op de bodem van de grachten kunnen vondsten aanwezig zijn, die inzicht kunnen geven aan de militaire activiteiten op en rond de verdedigingswerken. Aanbevolen wordt om bij de voorgenomen werkzaamheden de lokale amateurarcheologen of historische verenigingen te betrekken.
Het verdient daarom aanbeveling om de uitvoerder van het grondwerk te wijzen op de plicht archeologische vondsten te melden bij de bevoegde overheid, zoals aangegeven in artikel 53 van de Monumentenwet.

⊕ Access resource on the web ⎘

Cliffords Tower is one of the last visible remaining structures of the medieval castle of York. The motte was first raised as part of a complex double motte and bailey system spanning the River Ouse in response to the Northern Revolt of 1068. However, Archaeological investigations around Cliffords Tower have shown that the site has been in use since the Roman period. In 2002-2003 InterCulture began to build a website www.cliffordstower.org.uk to explain the site both structurally and socially, exploring its role within the City of York through the people, events and objects related to it. The process of research and development for www.cliffordstower.org.uk generated a substantial database of material describing the site. These references include modern and historical texts, archaeological excavations, objects, websites, film and music. They are held by a number of institutions and organisations in and around York. The digital signpost has been designed to enable access to these references and facilitate further research.
